

## Imperium Building Systems Ltd, Surrey

Imperium Building Systems Ltd is a CentralLine by Honeywell Partner dedicated to providing clients with cost-effective solutions based on an extensive experience of building automation and system integration.

Steve Crocombe, engineering director, explains, 'We believe customer satisfaction is dependent on understanding our client's enterprise and working closely with them to ensure we deliver a system that satisfies their present needs whilst allowing future expansion.'

'This has to be backed up with all the capabilities a systems integrator must have to design, engineer and build the complete elements of a BEMS (building energy management system), including control panel and rack manufacture.'

'Imperium specialises in BEMS integration, undertaking to provide a single system encompassing every aspect of building automation that is installed, commissioned and maintained by skilled and experienced engineers.'

'A single integrated-system approach demands we keep at the forefront of new technology to ensure we can maximise system flexibility whilst minimising installation and

running costs.

'Achieving this requires engineering professionalism to be the core value for our company where experience, training and self-motivation is paramount to integrate and optimise the wide range of equipment and subsystems in modern buildings.'

Open protocols – including BACnet, KNX, M bus, Dali, Modbus and LON – are engineered with the Niagara software based Hawk AX. This enables us to offer a wide spectrum of economically attractive integration options – typically, security, lighting, climate control and AM&T (automatic monitoring and targeting).

All of our staff are regularly trained and updated in the latest building-technology systems and projects to ensure they are fully versed in the most innovative solutions in the residential and commercial sectors.'

Imperium's knowledge base is built on engineering building systems for a wide and diverse range of applications – including luxury hotels, office blocks, industrial cleanrooms and department stores.

Will Burns, sales director, says, 'We see ourselves as primarily an integration company, with the skills necessary to advise our clients of the 'best-fit' solution for their building and business.'

'Being a CentralLine Partner with access to the Hawk integration controller and Niagara AX gives us a solid foundation to offer our customers a single efficient and effective integrated solution with the flexibility to expand or change with clients' requirements and new technology.'

'We have been particularly interested to see growth in the luxury high-end residential apartment sector where smart devices are used increasingly to control lighting, climate-control and audio-visual systems – both remotely and inside the home.'

Jim Sword, CentralLine sales leader, summarises, 'Imperium Building Systems is a new and exciting company that is working at the leading edge of integration, communication and energy conservation.'

'The company is typical of CentralLine Partners that embrace the future controls industry, and we are looking forward to working with Imperium on some interesting and innovative projects.'
